THIS LOOKS GOOD

COMMUNITY SILO BUILDING

Bear Lake County, Idaho, had never had a silo built in the county. In connection with a program-making-campaign by the agents three communities showed an interest in the use of silage. At one of the community meetings held at Liberty the first of March with twenty farmers present, one proposed that as a community they assemble the necessary sand and gravel on one man's farm and give him the necessary assistance in construction and filling to make a demonstration as to the value of silos to the community. This proposition was adopted by those present and the silo will be built on the farm of one of the members. The sand and gravel are on the ground. The commercial club of a nearby town agrees to furnish the forms and rent them to the farmers, while a local merchant agrees to supply a cutter and filler for the first season at a nominal rent charge to silo owners. This shows good co-operation on the part of every one concerned and is a fine example of what getting together and talking over farm problems can accomplish.
